

Term Work–Wise Hour Bifurcation Aligned with Innovative Assignment–1

Term Work 1 – Case Study and Data Breach Analysis

C01 | 10 Hours

Assignment–1 Activity	Hours	Justification
Case/Organization Selection and Background Study	2	Time required to select one real-world cyber incident/data breach and understand the organization, technology, users and incident background.
Threat and Attack Vector Analysis	2	Time required to identify cyber threats, threat actors and attack vectors associated with the selected incident.
Vulnerability and Root-Cause Analysis	2	Time required to examine security weaknesses, vulnerabilities and root causes responsible for the incident.
Data and Impact Analysis	2	Time required to analyze affected data and technical, financial, privacy and societal impacts.
Incident Response, Mitigation and Analytical Output	2	Time required to study incident response and mitigation measures and prepare an attack-flow diagram/vulnerability map.
Total	10	Directly supports C01 through comprehensive real-world cyber-incident investigation.

These activities directly correspond to your Assignment–1 sections **Case Study and Data Breach Analysis**, including threat, vulnerability, affected data, impact, root cause and mitigation.

Term Work 2 – Privacy and User Consent Analysis

CO2 | 10 Hours

Assignment-1 Activity	Hours	Justification
Data Collection and Personal Data Identification	2	Time required to identify the types of personal data collected and understand the organization's data collection practices.
Data Processing and Sharing Analysis	2	Time required to examine the purpose of data processing and data-sharing practices.
Privacy Policy and Consent Analysis	2	Time required to study the official privacy policy and evaluate user consent mechanisms.
Data Retention, User Control and Privacy Risks	2	Time required to examine retention practices, user control and privacy risks.
Privacy Gap Analysis and Documentation	2	Time required to identify privacy gaps and prepare the required privacy gap analysis as an original analytical output.
Total	10	Directly supports CO2 through practical analysis of privacy and user-protection practices.

This is directly aligned with your Assignment-1 **Privacy and User Consent Analysis**, which covers collection, processing, sharing, privacy policy, consent, retention, user control and privacy risks.

Term Work 3 – Security Technology Analysis

C03 | 10 Hours

Assignment-1 Activity	Hours	Justification
Encryption, Password Hashing and Authentication Analysis	2	Time required to examine cryptographic and authentication controls applicable to the selected case.
Access Control, MFA, RBAC and Least Privilege	2	Time required to analyze identity and access-control mechanisms that could prevent unauthorized access.
Cloud Security, IAM, Logging and Monitoring	2	Time required to examine cloud security, identity management, logging and security monitoring controls.
Backup, Recovery and AI-Assisted Security	2	Time required to evaluate backup/recovery and AI-based anomaly, fraud or intrusion detection mechanisms.
Security Technology Comparison and Architecture	2	Time required to determine applicable preventive controls and develop a security architecture/framework as an original output.
Total	10	Directly supports C03 through evaluation of security technologies applicable to data-driven systems.

This follows the exact technologies specified in your Assignment-1, including encryption, hashing, authentication, MFA, access control, RBAC, least privilege, cloud security, IAM, monitoring, logging, backup/recovery and AI-assisted security.

Term Work 4 – Data Governance, DPDP Act 2023, Ethical Data Usage and Responsible AI

C04 | 10 Hours

Assignment-1 Activity	Hours	Justification
Data Governance and Data Lifecycle Analysis	2	Time required to examine data ownership, stewardship, classification, storage, access, sharing, retention and accountability.
DPDP Act 2023 Analysis	3	Time required to map personal data, processing, notice, consent, security safeguards, breach, retention, user rights and accountability.
Ethical Data Usage Analysis	2	Time required to evaluate privacy, fairness, transparency, accountability, bias, data minimization and responsible data collection.
Responsible AI Analysis	1	Time required to examine bias, explainability, human oversight and responsible AI deployment where applicable.
IPR Analysis and Integrated Risk Assessment	1	Time required to identify a relevant IPR issue and assess governance, privacy, AI and security risks.
Proposed Governance/Security Solution	1	Time required to integrate recommendations into the proposed security and governance framework.
Total	10	Directly supports C04 by integrating governance, DPDP, ethics and Responsible AI into responsible data management.

These activities align with your Assignment-1 sections on **Data Governance, DPDP Act 2023, Ethical Data Usage, Responsible AI, IPR and Integrated Risk Assessment.**

Final Term Work Alignment

Term Work	Innovative Assignment–1 Component	Hours	CO
Term Work 1	Case Study & Data Breach Analysis	10	CO1
Term Work 2	Privacy & User Consent Analysis	10	CO2
Term Work 3	Security Technology Analysis	10	CO3
Term Work 4	Data Governance, DPDP Act 2023, Ethical Data Usage & Responsible AI	10	CO4
Total	Integrated Information and Data Security Investigation	40	CO1–CO4

Important alignment

Your Assignment–1 already requires **three original analytical outputs**, such as an attack-flow diagram, vulnerability map, privacy gap analysis, DPDP compliance matrix, risk assessment matrix, security architecture, Responsible AI risk matrix, IPR mapping or incident-response workflow.

Therefore, the Term Works should **not become four separate assignments**. They should be treated as **four assessed stages of the same 40-hour Innovative Assignment–1**:

TW1 → Investigate the Incident

TW2 → Investigate Privacy & Consent

TW3 → Evaluate Security Technologies

TW4 → Evaluate Governance, DPDP, Ethics & Responsible AI

→ Integrated Final Report + Analytical Outputs + Security/Governance Solution + Presentation

This gives you a clean **40-hour Term Work justification and direct C01-C04 alignment** without changing the core content of your existing Innovative Assignment-1.
